

The figure displays two side-by-side box plots representing the distribution of EM values for two groups, labeled 0 and 1. The left plot, corresponding to group 0, is rendered in grey. It features a median line at approximately 0.5, a box spanning from roughly 0.3 to 0.7, and whiskers extending from 0.1 to 0.9. The right plot, for group 1, is rendered in red. Its median line is higher, at approximately 0.7, with a box spanning from roughly 0.5 to 0.9 and whiskers extending from 0.3 to 1.0. Both plots include individual data points overlaid on the box plots. A legend in the top right corner identifies the groups by color: grey for EM 0 and red for EM 1.

A horizontal number line with tick marks at 0 and 1. The label 'EM' is centered below the line between 0 and 1.
